## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 2, 5-17, and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Templeton et al. (*Langmuir* 1999, 15, pg. 66-76) in view of Foos et al. (*Chem. Mater.* 2002, 14, pg. 2401-2408).

The rejection is cited in the Office Action filed 7/3/2006. [REDACTED] ktt 1/07

### *Response to Arguments*

3. Applicant's arguments filed 12/11/2006 have been fully considered but they are not persuasive.

Claims 2, 5-17, and 19 as rejected over Templeton and Foos:

The Applicant argues that the water content in the reaction solvent mixture has to be well-controlled in order to get the product with good yield and that the control of water content was a key finding that had never been disclosed in the prior art. The Applicant further argues that the 2003 JACS paper provides evidence for such unexpected results. However, the claims are not in commensurate in scope with the evidence provided in the 2003 JACS paper. For example, the claims do not require, inter alia, the water soluble metallic nanoparticle with a mixed monolayer to be an ethylene glycol protected gold nanoparticles, the water miscible solvent to be methanol, the reducing agent to be NaBH<sub>4</sub>, and the shielding component to be an ethylene glycol. There is no evidence indicating that the water content would show unexpected results for making any nanoparticle or when using any solvent, reducing agent, and shielding component. In addition, the 2003 JACS paper does not even seem to mention the use of a capture coating component when coming to the conclusion of a criticality on the water content. Therefore, the evidence as provided in the 2003 JACS paper does not properly overcome the

Art Unit: 1762

rejections of Templeton and Foos because the claims are not commensurate in scope with the present claims.

The Applicant argues that a 131 Declaration signed by Ming Zheng swears behind the online publication date of Foos and that the claimed invention is nonobvious over Templeton with the removal of Foos as a reference. In the 131 Declaration, Ming Zheng refers to Exhibits 1 and 2 as evidence of reduction to practice. However, Exhibits 1 and 2 cannot be found in the response submitted 12/11/2006 and have not been considered for obvious reasons. Without such evidence, the Applicant can not overcome the Foos reference. The rejection has therefore been maintained.

#### ***Conclusion***

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
